

Important information about your files.

1. HIRES, These are huge, around 111mb and A2 @ 300dpi in TIFF format. *They are the highest quality single shot files presently available.* They are designed for repro and have been post produced to the highest standard in our fully calibrated digital darkroom. Being the size of 4 A4 front covers there is plenty of scope for creative cropping. *Don't try emailing them.*

2. MEDRES, These are a level down from HIRES and are supplied as JPG format. They will expand up to 27mb in Photoshop and saved as a TIFF will cover A4. They will email but don't blow them up or crop them as they will pixillate. These are fine if you just need the pictures small, use the TIFF if you want them big. *These live on the last CD/DVD in your set.*

3. LOWRES, These are a quick way of looking at your files and for emailing and power-point presentations. Don't try repro-ing from them, they're way too small! *These live on the last CD/DVD in your set.*

Your images have been carefully post produced in a calibrated RGB Adobe 1998 colour profile, please view them in this profile.

If you lose your discs, I can get another set, but I will have to charge a small cost. *We make backups of all our work but in case of fire, media failure or human error we cannot be held legally responsible for your images.*
